

Configure Safe Search

 For supported software information, click [here](#).

You can use Concerto safe search to restrict the types of links that appear in internet search results when using the Bing, Google, and YouTube search engines. You can configure safe search for traffic that originates in certain source zones, from certain users, or from certain user groups only.

You can configure safe search for tenants that use the Versa Secure Internet Access (VSIA) service or both the VSIA and Versa Secure Private Access (VSPA) services. You cannot configure safe search for tenants that use only the VSPA service.

To configure safe search:

1. Go to Configure > Secure Services Edge > Real-Time Protection > Safe Search.

2. Click the Enforce Safe Search slider to enable safe search.

Configure > Secure Services Edge > Real-Time Protection > Safe Search

SafeSearch Publish

SafeSearch

☒ Enforce SafeSearch

Turning on SafeSearch helps hide explicit content from search results in Google Search, Bing and YouTube.
