

Configure Device Location and Contact Information

 For supported software information, click [here](#).

To configure or edit the location and contact information for a Versa Operating System™ (VOS™) device:

1. In Director view:
 - a. Select the Configuration tab in the top menu bar.
 - b. Select Devices > Devices in the left menu bar.
 - c. Select a Controller or VOS device in the main pane. The view changes to Appliance view.
2. Select the Configuration tab in the top menu bar.
3. Select Others > System > Configuration > Configuration in the left menu bar.
4. In the main pane, locate the Identification panel.

The screenshot shows the Versa Networks Director interface. The top navigation bar includes 'Director View', 'Appliance View', and 'Template View'. The left sidebar shows the 'Configuration' tab selected under 'System'. The main pane displays the 'Identification' panel for 'SDWAN-Branch1'. The 'Identification' panel includes fields for 'Name' (SDWAN-Branch1), 'Location' (1 Hacker Way, Menlo Park, CA, USA 94025), 'Subjugation' (Enabled, Allow CLI), and 'VNF Manager' (IP Address/Prefix: 192.168.75.2/32, Interface: tvl-0/41.0). The 'Sessions' panel on the right shows various flags and timeouts.

5. Click the  Edit icon. In the Edit Identification popup window, enter information for the following fields.

Edit Identification
