Upgrade the Versa Messaging Service

For supported software information, click here.

To upgrade the Versa Messaging Service (VMS) software:

1. Download the VMS .bin file to a local folder on the VMS server. The VMS images are located at https://versanetworks.app.box.com/s/d7jh1z6y3kaijd3yfwil0uxchr1w9ton/folder/164725038794

2. Run the .bin file:

   ~$ **sudo** */path-to-.bin-file/versa-msgservice-release-date***.bin**

   For example:

   ~$ **sudo /var/tmp/versa-msgservice-20211211-223341-db28746-21.22.bin**

3. Upgrade the container:

   ~$ **vsh container-upgrade**

Supported Software Information

VOS Releases 22.1.3 and earlier support all content described in this article when used with the initial release of VMS (unnumbered).

Additional Information

Configure Passive Authentication for VMS
Hardware and Software Requirements for Headend
