Factory Default Settings for Branch Devices

For supported software information, click here.

Each physical or virtual Versa Operating System^{TM} (VOS^{TM}) device has default factory settings. The default factory settings are stored in the following files:

- /opt/versa/etc/bootcfg/default-device-versa-csg7xx-specific.cfg—For CSG700 series appliances
- /opt/versa/etc/bootcfg/default-device-versa-csg1xxx-specific.cfg—For CSG1000 series appliances
- /opt/versa/etc/bootcfg/default-device.cfg—For all other appliances

The default factory settings settings are stored in files in the /opt/versa/etc/bootcfg directory on the VOS device. For example:

```
[admin@CSG355: bootcfg] $ pwd
/opt/versa/etc/bootcfg
[admin@CSG355: bootcfg] $ ls -al
total 56
drwxrwxr-x  2 versa versa  4096 Nov 24 20:50 .
drwxrwxr-x 17 versa versa  4096 Nov 24 20:59 ..
-rw-rw-r--  1 versa versa 13962 Oct  2 07:01 default-device.cfg
-rw-rw-r--  1 versa versa 16156 Oct  2 07:01 default-device-versa-csg1xxx-specific.cfg
-rw-rw-r--  1 versa versa 14458 Oct  2 07:01 default-device-versa-csg7xx-specific.cfg
```

To return to the factory default configuration, issue the following command on the VOS device:

```
admin@CSG355-cli> request system load-default
```

For example:

```
admin@CSG355-cli> request system load-default ?
Description: Reset the appliance to default device configuration
Possible completions:
  create-snapshot - Create FACTORY-DEFAULT snapshot (on load default completion)
admin@ODI-TEST-CSG355-JAB20023804-cli> request system load-default
```

Supported Software Information

Releases 20.2 and later support all content described in this article.
